Darlene L. Heller, Director of Planning and Zoning  
Craig Peiffer, Assistant Director of Planning and Zoning  
City of Bethlehem  
10 E. Church Street  
Bethlehem, PA 18018

Dear Ms. Heller and Mr. Peiffer,

We appreciate the opportunity to comment on the proposed development at 3410 Linden Street. Our recommendations are in support of Bethlehem City's Climate Action Plan (CAP), which aims to reduce our carbon footprint, increase sustainability and utilize alternative energy sources.

New construction projects provide opportunities to employ energy saving strategies that will lower energy costs and at the same time reduce pollution from traditional energy sources. Therefore, we strongly recommend that the developer utilize sustainable building materials and energy efficiency measures beyond the building code, such as passive solar design features, advanced lighting controls, high efficiency HVAC equipment, increased insulation and advanced air sealing techniques to reduce infiltration.

Furthermore, we strongly recommend that the developer perform a solar assessment, and if feasible, include a rooftop solar energy systems. At a minimum the buildings could be constructed with adequate structural rooftop capacity and electrical rough-ins so that solar could easily be added at a later date. Note that there are currently tax credits for new solar energy systems.

In addition, Northampton County adopted the Commercial Property Assessed Clean Energy (C-PACE) program. C-PACE is an innovative financial tool that allows financing for solar, increased energy efficiency and water conservation projects to be attached to the property instead of the owner. This can free up developers' finances by placing the assessment on the property and structuring repayment through property taxes. C-PACE has recently been expanded to allow for multi-family developments. It is anticipated that Northampton County will approve and include this new provision in early 2023.

Landscaping is important and we recommend a natural vegetative buffer both along the perimeter of the property and surrounding the building to reduce the size of lawn to maintain, aid in stormwater management due to the increase in impermeable area, make the development more inviting and serve as a screen for neighboring homes. We advise coordinating with the City Forester in the selection of native species for trees and bushes.

We commend the incorporation of a bicycle parking rack. The CAP recommends the inclusion of "easily-accessible, secure, sheltered bicycle parking" (Transportation Strategies T1.2 and T1.9). It is not clear whether the bicycle parking area is enclosed or sheltered, which would be necessary to make it truly usable for residents. In addition, we applaud the inclusion of two EV charging stations. If possible, we suggest wiring the area for additional charging stations for future use.

Thank you for your consideration.

Sincerely,

*Lynn Rothman*
