Darlene L. Heller, Director of Planning and Zoning  
Craig Peiffer, Assistant Director of Planning and Zoning  
City of Bethlehem  
10 E. Church Street  
Bethlehem, PA 18018

Dear Ms. Heller and Mr. Peiffer,

We appreciate the opportunity to comment on the proposed development at 608 Pierce Street. Our recommendations are in support of Bethlehem City's Climate Action Plan (CAP), which aims to reduce our carbon footprint, increase sustainability, utilize alternative energy sources and promote resilience to changing climate conditions.

New construction projects provide opportunities to employ energy saving strategies that will lower energy costs and at the same time reduce pollution from traditional energy sources. Therefore, we strongly recommend that the developer utilize sustainable building materials and energy efficiency measures beyond the building code, such as passive solar design features, advanced lighting controls, high efficiency HVAC equipment, increased insulation and advanced air sealing techniques to reduce infiltration.

Furthermore, we strongly recommend that the developer evaluate the inclusion of solar panels, which can be done at no cost by a solar energy contractor. If solar is feasible now or in the future, the building can be constructed with adequate structural rooftop capacity and electrical rough-ins to support a solar energy system.

Northampton County adopted the Commercial Property Assessed Clean Energy (C-PACE) program. C-PACE is an innovative financial tool that allows financing for renewable energy, increased energy efficiency, water conservation and indoor air quality projects to be attached to the property instead of the owner. This can free up developers' finances by placing the assessment on the property and structuring repayment through property taxes.

C-PACE has recently been expanded to allow for multi-family developments and it is possible that this development would qualify. The Sustainable Energy Fund (SEF) administers the C-PACE program for Northampton and Lehigh Counties and can provide

information on the program ([www.theSEF.org](http://www.theSEF.org)). Furthermore, there are currently tax credits for new solar energy systems.

The landscaping plan should be coordinated with the City Forester. This is especially important since the changing climate could impact the optimum selection of native species. Note that mature existing trees have a higher carbon sequestration capacity than new plantings. Replacement trees on the property would be in addition to trees required for street trees.

The CAP recommends the inclusion of "easily-accessible, secure, sheltered bicycle parking" (Transportation Strategies T1.2 and T1.9). We recommend the inclusion of bicycle parking, especially as students may be apt to use bicycles as transportation.

Thank you for your consideration.

Sincerely,

*Lynn Rothman*
